

the problem

# Problems Faced

- Content: Struggling to output a clean full image of the 3d Robot.
- Description of challenges encountered during development
  - Technical issues and bugs: we had to rewrite the code because when we scan the bass (Which is a card), the scan worked but the 3d object didn't pop up.
  - Solutions and troubleshooting steps taken: we also change the size of the 3d object so we can see the 3d object clearly.
- Lessons learned from overcoming these challenges: Read the steps carefully and watch what you're doing carefully.
